Github : <https://github.com/sandeepkumar9760>

Email: sandeepkumar270724@gmail.com
Mobile: +918755332068

Skills

- **Languages:** Cpp, Python
- **Database:** MySQL, MongoDB, PostgreSQL, Firebase, DynamoDB
- **Tools/Platforms:** Vercel, Git/GitHub, Figma, Ubuntu, AWS, GenAI, Power BI , MS Excel
- **Course work:** Data Structures and Algorithms (DSA), Object Oriented Programming (OOPs),(DBMS)
- **Soft skills:** Problem-solving, Teamwork, Adaptability, Communication, Detail-oriented
- **Frameworks:** Django , Flask , FastApi

Projects

Smart-AI Automatic Attendance System | [GitHub](#)

Stack:Python,Django,PostgreSQL,facerecognition, dlib,OpenCV, NumPy,HTML5/CSS3/JS

- Designed and implemented a real-time AI-based Smart Attendance System using Python, OpenCV, and deep learning (CNN-based face recognition) to automate student identification, reduce proxy attendance, and store attendance logs in a structured database with high recognition accuracy.

LeetCode-AI | [GitHub](#)

Stack: Python, FastAPI, Ollama (phi3), JavaScript, Chrome Extension (Manifest V3), HTML, CSS

- Built an AI-powered Chrome extension that acts as an interactive DSA coach on LeetCode, scraping problem details from the DOM and sending them to a local FastAPI backend integrated with a locally running LLM to deliver problem explanations, step-by-step approaches, time/space complexity analysis, hints, and auto-generated C++ solutions.

BlockBites-LPU | [GitHub](#)

Stack:Django (Python), PostgreSQL, HTML5, CSS3, JavaScript.

- Built a scalable full-stack campus food ordering platform using Django (Python), PostgreSQL, and responsive HTML/CSS/JavaScript — featuring block-wise stall browsing, real-time order tracking, vendor dashboards, and demand analytics with future AI-readiness.

CampusInsights-360| [GitHub](#)

Stack: Python (Django/Flask/FastAPI), HTML5, CSS3, JavaScript, Database (MySQL/PostgreSQL), optional AI integration for analytics & automation.

- Engineered a Smart AI-Enabled Campus Management System using Python (Django/Flask), SQL database, and dynamic frontend technologies to optimize classroom utilization, faculty workload distribution, and campus analytics.

Vector Embedding | [GitHub](#)

Stack:Python, Pytorch , Numpy

- Developed a Mini GPT-style language model from scratch using PyTorch, implementing a custom tokenizer, multi-head self-attention, positional embeddings, and an end-to-end training pipeline for next-token prediction and text generation.

Training

Data Structures & Algorithms Using CPP | Lovely Professional University

June-July 2025

- Implemented and analyzed core DSA concepts including arrays, linked lists, stacks, queues, trees, graphs, and sorting/searching algorithms in C++. Applied time & space complexity analysis (Big-O notation) to optimize solutions for real-world problem-solving scenarios.

Deloitte Virtual Internship | [LINK](#)

December 2025

Certifications

- Master Generative AI & Generative AI tools (ChatGPT & more) | Infosys Springboard| [Link](#) August 2025
- ChatGPT-4 Prompt Engineering: ChatGPT, Generative AI & LLM | Infosys Springboard| [Link](#) August 2025
- 8 Certifications Of Coursera | [Link](#)

Education

▪ Lovely Professional University

B.Tech-Computer Science and Engineering

Phagwara, Punjab
Since August 2023

▪ Holy Child School, Bilaspur

Intermediate

Bilaspur , Uttar Pradesh
April 2021 – March 2022
